

Disinfection program for Corona Virus/ COVID 19

In today's situation the management of Corona virus through any disinfectant is mandatory. For effective application of the suitable Virucide, we have to use proper spraying technologies in Low to high volume spraying depending on the surface and the type of Virucide used.

The Government agencies have taken up mass spraying in common areas and in particular the infected areas. They have also advised private areas like Offices, industries, Hospitals, Schools, Hotels, Condominiums etc. etc. to conduct their own disinfection program within their premises to safeguard the health of the inmates as a precautionary measure.

Trans Asia International, a company established in Bangalore, India, with more than 2 decades of expertise in spraying technology have compiled various different types of sprayers and Virucide to suit different applications, which are given below.

Handheld sprayers easy to operate, for very small office premises, small apartments, clinics, shops etc. and Battery operated knapsack Sprayers a for medium size offices, schools, small industries etc.

For Bigger areas,
Condominiums,
Apartment complexes,
large Schools,
Vehicles like Lorries, buses etc.

The Next Generation of Disinfection Solution for Health Care

Protection from Cross infections of MDR Strains, MRSA & Legionella

Huwa-San is environmentally friendly and its technology protects the environment and human health from bacteria and toxic by-products, unlike most others that leaves toxic residues. It is highly effective against MDR strains, MRSA, Hepatitis, HIV, VRE, Pseudomonas, Influenza, Streptococci etc. Huwa-San is a high-level disinfectant & used as a disinfectant for heat-sensitive equipment such as dialysis instruments, surgical instruments, suction bottles, bronchoscopes, endoscopes, ear, nose, and throat instruments. Huwa-San also acts on germ laden surfaces, reducing the risk of transmission of infectious organisms from environmental surfaces and also prevents and control airborne pathogens in healthcare facilities and improves the air quality. Huwa-San is highly effective against MRSA and many other pathogenic microorganisms and therefore has the potential for reducing the spread of infections in the environment.

HUWA SAN 25

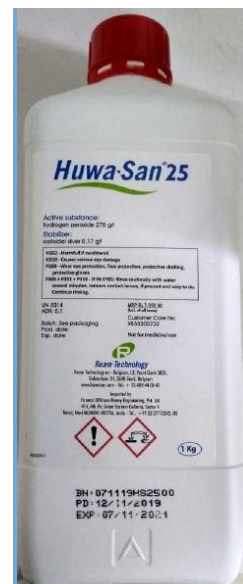

Usage: Instant viricide , spraying chemicals , Eco Friendly , Food Safe. Applications for

Surface Mopping - 20 ml/Ltr Water

Spraying - 50 ml/Ltr Water

Cold Fogging - 50 ml/Ltr Water

Use Protective gloves and mask while spraying / fogging. Read products details before use.
